

ACCESS ● CCTV ● FIRE ● GATES ● INTRUDER

WHO WE ARE

Pritchard Security Systems specialise in the design, installation and maintenance of all forms of electronic security, including CCTV, fire, intruder, access control and gates/barriers.

Our systems currently protect many thousands of premises, from private residential properties, through housing association developments, to large industrial and commercial sites, and vary in complexity from straight-forward residential intruder alarms to highly technical systems, utilising several types of security products, installed across several sites to satisfy a variety of security needs. We also provide consultancy and advice for both private and professional clients.

At Pritchard, we pride ourselves on combining a wholly professional attitude with a friendly and approachable demeanour – in summary, in being the kind of company you'll enjoy doing business with. When it comes to our after-care service, we go the extra mile to ensure your total satisfaction with the result that we now enjoy a large customer base of contented clients, small and large, private and professional, who come back to us time and again, whenever they require advice, systems' upgrades or new system installations.

SECTORS

Pritchard has extensive experience working within the following sectors:

- Housing Associations
- Residential
- Retail
- Public Sector
- Void properties
- Industrial/Commercial
- Facilities Management
- Multi-site
- Temporary site

PROFILE

Pritchard Security Systems has been installing security systems since 1980 during which time we have established a reputation for quality, reliability and a pragmatic, value-for-money approach. Our highly-regarded service provides peace of mind to thousands of customers across the UK.

We are totally independent and constantly strive to provide security systems that deliver outstanding performance quality for the best possible price. When our employees audit your premises you can rest assured that you are receiving best advice from professionals whose only motivation is to ensure you end up with a security system that does the job you need it to do.

We invest heavily in staff training to ensure that our engineers' skills remain polished and that their product knowledge is always current.

The company is a registered member of the National Security Inspectorate, our employees are registered with or accredited by either CHAS, Construction Line or NSI and Pritchard Security is registered for BS5750 and the updated European Standard ISO EN 9002.

WHAT WE DO

Pritchard Security Systems designs, installs and maintains of all forms of electronic security systems. However, in order to achieve the end result of a fully-operational, reliable security system that totally meets your needs there are several, logical steps which need to be taken.

PROFESSIONAL ADVICE

From the outset, we take care to listen carefully to what you need your system to deliver once it's completed and installed. If you're not sure then we'll provide best advice, based on our in depth knowledge of the market and our vast experience, to help you decide. By working with you collaboratively, every step of the way, we can be sure you will end up with a system that completely satisfies your needs and meets your expectations.

DESIGN

Following the consultation process we will design your security system so that all your requirements are met in terms of the functionality you require. This may be as easy as specifying a single, simple, out-of-the-box solution. However, for large projects the design process will be much more involved than that as we select specific products based on your needs and their ability integrate together to deliver a bespoke, robust, reliable and effective system that delivers on your expectations at every level.

INSTALLATION

Our systems are installed by highly trained and experienced engineers and all our installations meet NASI specifications. Once on site, we aim to complete installation in a timely and efficient manner so that your system becomes operational as quickly as possible. Following installation, we clear away any rubbish or other debris that has been generated as a result of the installation of your security system, leaving your premises in the same state in which we found them.

MAINTENANCE AND REVIEW

Once installed, it's important that security systems are properly maintained and reviewed to make sure they continue to deliver effective protection in line with a client's original need as well as provide appropriate increases in security should circumstances change over time. In cases where insurance premiums are based on the premise that a client has a fully operational security system it is absolutely imperative that systems are checked regularly to ensure the conditions of an insurance policy are met. Our maintenance and review service ensures that:

- vital fire and security systems will work when they are needed
- the number of faults and the duration of down times are minimised
- high levels of performance are preserved
- your equipment rarely needs to be replaced and works for longer ultimately saving you money

SYSTEM SUPPORT

Inevitably, even with regular maintenance, there are going to be occasions when something goes wrong. What you need then is total peace of mind that it's going to be fixed in the shortest possible time and with a minimum of fuss. A single call to our service team is all it takes. They will despatch an engineer 24 hours a day, 365 days a year and, to ensure your time isn't wasted, our advanced management system tracks the location and availability of all on-duty service engineers, matching their individual skills and training with the specification of your system, to ensure you receive the expertise you need straight away.

PRODUCTS

We understand that the quality and reliability of the products we specify to our clients forms a large part of our reputation with customers. As a result, we are committed to keeping abreast of the latest technological developments impacting on our industry so constantly monitor the market for innovative new products that are coming on stream.

By knowing what's available and having a thorough understanding of your requirements and budget, we are always able to recommend products that ensure your security system is exactly fit for purpose.

In addition, we insist on independent performance evaluations to make certain that new products deliver on what they promise and the ongoing performance of existing products remains at a consistently high standard.

CCTV

Closed Circuit Television is excellent at deterring theft, robbery, violence and vandalism and systems are now cheaper to install and easier to use than ever before. However, choosing the right equipment can be a minefield if you don't know exactly what you're doing. Pritchard Security Systems can provide advice on exactly the right combination of cameras and recording equipment to observe and protect your property – at home and abroad – goods, visitors and staff whilst ensuring your activities remain within legally defined boundaries.

FIRE ALARMS

Pritchard Security Systems is experienced in all aspects of practical fire prevention and protection. Regardless of whether you're a homeowner or a business, we understand exactly what system you need in order to prevent fires occurring in the first instance and, should the worst happen, to provide early detection so as to minimise the risk to life and

damage to property. For business clients, utilising our service also ensures that you remain compliant with legislation regarding fire safety rules.

INTRUDER ALARMS

Theft and criminal damage by intruders mean a constant threat and ever increasing costs to business and domestic premises. Fitting an intruder alarm system offers peace of mind and, in most cases, results in lower insurance premiums.

Whatever your particular requirements, Pritchard Security Systems will assess the particular risks to your premises and/or operation and design an intruder alarm solution that exactly meets your needs. Our solutions are extremely user-friendly and will provide years of trouble-free, effective protection.

ACCESS CONTROL

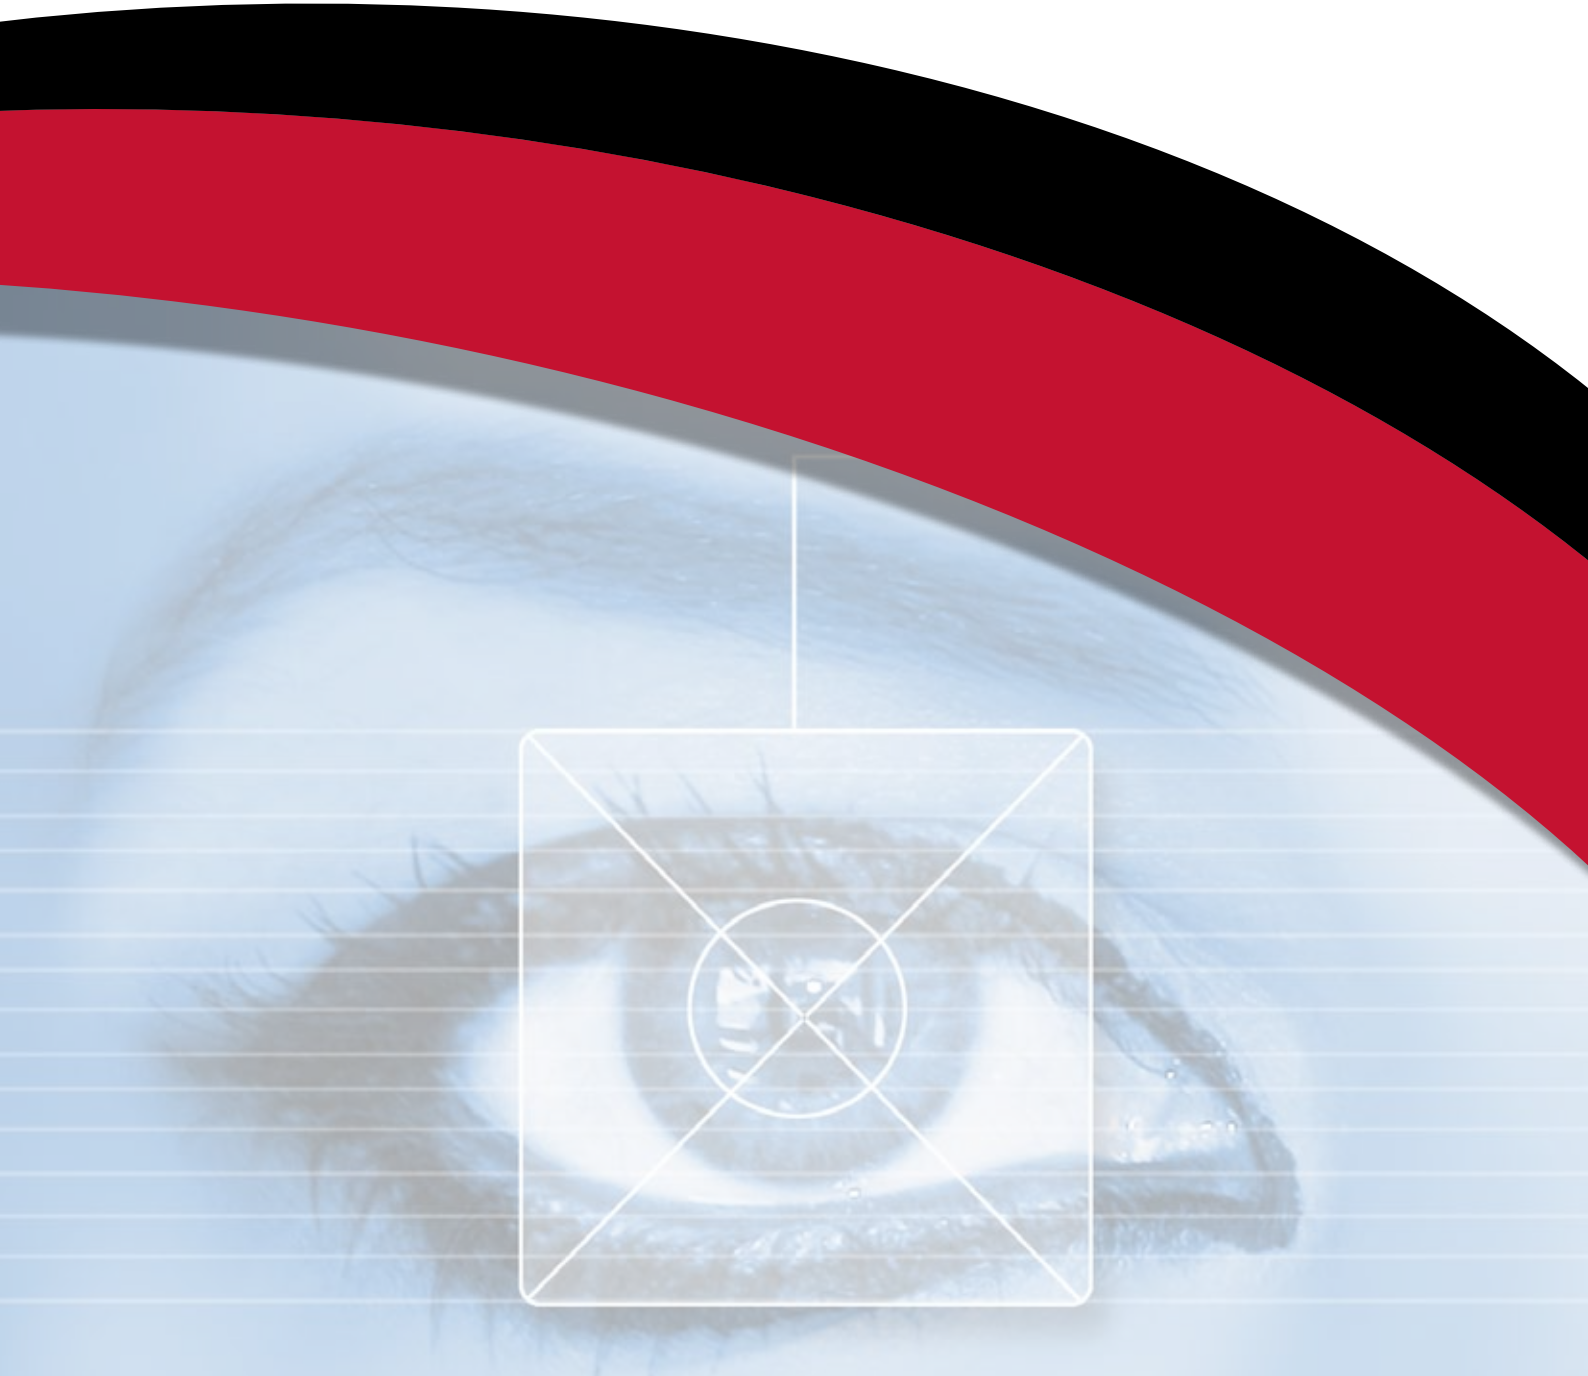

In today's society, there is an increased requirement for the monitoring and control of people entering and leaving all kinds of buildings as well as to limit access to secure areas within a building to select individuals.

To meet these needs, Pritchard Security Systems designs solutions from simple, one-door entry point systems, with or without complementary video surveillance, to complex computer-based site management systems with various points of entry, all controlled from a single operational centre.

AUTOMATED GATES AND BARRIERS

Pritchard Security Systems has designed, installed and maintains automated gates and barrier systems for several blue chip organisations.

We can also supply and install a full range of perimeter security equipment, including gates, barriers, turnstiles, road blockers and associated works.
